PROFILE

Software engineer with a Computer Science degree, building backend-heavy full-stack and AI-assisted applications with Python/FastAPI, PostgreSQL and React Native/TypeScript. My main project, Elvyn, is a mobile productivity app with a Retrieval-Augmented Generation (RAG) feature built on pgvector and Gemini, background workers, and per-user data isolation. I have also built and deployed a Next.js community platform, and hold a RAG certification from DeepLearning.AI (Coursera). Founder of KunleTech (K.T Labs Ltd); currently an IT Operator at DataGuard NG during NYSC. Looking for an entry-level or junior engineering role.

TECHNICAL SKILLS

Backend: Python · FastAPI (async) · SQLAlchemy 2.0 · Alembic · REST API design · JWT / Supabase Auth · Celery · Redis · Node.js / Express

Frontend & Mobile: React · Next.js · React Native (Expo) · TypeScript · JavaScript ES6+ · HTML5 · CSS3

AI Applications: RAG pipelines · Embeddings & vector search (pgvector) · Google Gemini API · Prompt engineering · LLM tool calling with user confirmation

Data: PostgreSQL · SQL · Supabase

Tooling: Code review · AI coding agents · Git / GitHub · Postman · OpenAPI / Swagger · pytest · Expo EAS · Vercel · Netlify · GitHub Pages

IT Support: Windows OS · Systems administration · Basic networking · Hardware/software support

PROJECTS

Elvyn — AI-assisted productivity app (formerly "Change") · github.com/Kunle777 · personal project, in development, pre-launch

- Built the backend in FastAPI (async) with SQLAlchemy 2.0, Alembic migrations and PostgreSQL on Supabase; verifies Supabase JWTs (ES256 via JWKS, HS256) and scopes every query to the authenticated user.
- Implemented a RAG pipeline: brain-dump and check-in text is chunked, embedded with Gemini (768-dim) and stored in pgvector; at question time, the most similar chunks (cosine similarity, minimum threshold, per-source cap, user-scoped) are added to the prompt as context, and their sources are returned to the app. Retrieval supplies context only; the model is not trained on user data.
- Made indexing idempotent and resilient: content hashing to skip unchanged text, Celery/Redis workers with a 15-minute reconciliation sweep, an AI-entitlement check, and a fallback to non-retrieval answers if embedding fails.
- Added a transactional outbox for task events, recurring task series, and scheduled reminders via Celery beat.
- Built AI tool actions where creating a task runs directly, while editing or deleting requires explicit user confirmation, with strict argument validation.
- Built the React Native (Expo) TypeScript client: tasks, calendar, brain dump, check-ins, win log, AI chat, voice task capture, notifications and passcode lock; EAS builds.
- Wrote an automated pytest suite for the backend using mocked dependencies. Status: pre-launch with no production users; live-database verification of the retrieval path is in progress.

FastAPI · SQLAlchemy · Alembic · PostgreSQL · pgvector · Supabase Auth · Gemini API · Celery · Redis · React Native (Expo) · TypeScript

Dynasty League · dynasty-league-h2lr.vercel.app · deployed

- Full-stack community platform for a 49-member online football league: live standings, admin panel, Hall of Fame and tournament brackets.

Next.js · Supabase · PostgreSQL · Vercel

FitInvoice · github.com/Kunle777/Fitinvoice · in development

- Invoicing and client-management SaaS for personal trainers. Backend built (FastAPI, JWT auth, per-user data isolation); frontend and payment integration are planned.

FastAPI · PostgreSQL · React

EXPERIENCE

Founder & Full-Stack Software Engineer — **KunleTech (K.T Labs Ltd)** *2024 – Present*

- Design and build web and mobile products independently, from architecture and backend through frontend and deployment (see Projects).
- Work with AI coding agents in my development workflow and carry out code review.
- Delivered a 7-page corporate website for Novel Breed Agric Ltd, with an enquiry form to capture leads.
- Test and document APIs with Postman and OpenAPI/Swagger; use Git for version control on every project.

IT Operator — **DataGuard NG** *February 2026 – Present*

National Youth Service Corps (NYSC) — ongoing

- Administer and configure up to 50 systems in the organization's Windows environment: setup, updates, user accounts and access.
- Maintain office IT infrastructure and basic networking; troubleshoot connectivity.
- Lead teammates on IT projects and take part in the data backup work; apply data protection practices under internal policy.
- Provide hands-on hardware and software support, solving most problems in-house.

Web Programming Intern — **Light Tech Programming** *Jul – Sep 2024*

- Built frontend projects in HTML, CSS and JavaScript under senior supervision, using Git and mobile-first responsive design.

IT Intern — **Animal Care Services Konsult Nigeria Ltd** *Jun – Sep 2022*

- Took an active part in networking work and supported hardware/software installation, updates and daily IT operations for a 100+ staff organisation.

EDUCATION

B.Sc. Computer Science

Crescent University, Abeokuta · Graduated 2025

CERTIFICATIONS

- Retrieval-Augmented Generation (RAG) — DeepLearning.AI, Coursera
- Frontend Development — Light Coding Academy
- React.js — The Complete Guide (Udemy)
- Microsoft Office Specialist
- CPN IT Professional
